

V2073 MULTILANE

Next generation of checkweighers

Varpe's multilane equipment has been designed to control and verify manufactured products

- thorough parallel systems
- for packers with different formers
- for lanes that, due to their configuration, converge at the same point

The equipment minimizes weighing times and costs by processing the product individually for each track and up to 6 tracks, allowing to program and monitorize the production set.

Varpe dynamic checkweighers increase **benefits of your production**

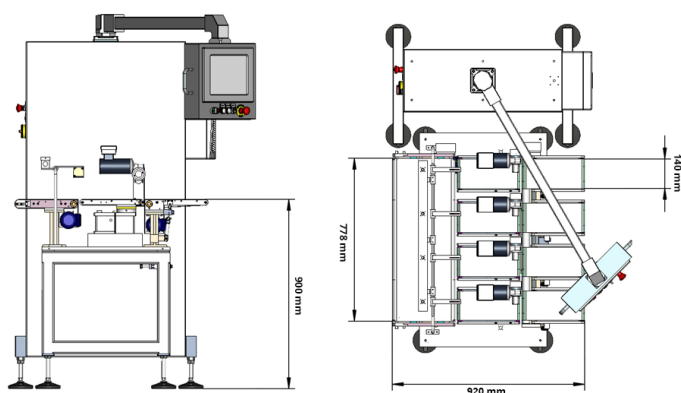

New generation of
quality control systems

Technical features

Production units / minute	Up to 150	Rejection signaltime control	Yes
Accuracy	From $\pm 0,2$ g	Motor	Asynchronous &/or Servo Motor
Unit of division	From 0,1 g	Operating temperature	0-40 °C
Storable memory formats	Up to 900	Frame construction	Stainless steel
Display	LCD-LED Tactil colour 12"	Working height	600 / 1200 mm
Protection	IP65	Autotare	Yes
Maximum weight	Up to 3 kg	Conveyor dimensions	Adapted to customer needs
Emergency stop	Yes		

Dimensions

Possibility of different sizes in height, weighing zone and rejection area

Options

- Reject confirmation
- Collection bin level sensor
- Product handling options (lateral guides, product guides, top and sidebands, rolls)
- Protections against air drafts, avoid access etc.
- Protection IP66
- Light and-or sound alarm
- USB port connection
- Data printer
- Barcode reader
- Leveller
- Independant baseplate
- Swivel display
- Automatic print listings
- Central data connection DATAHUB WEB, MOD BUS TCP IP, DATAHUB LT
- Ethernet connections, RS-232 y RS-485
- Users control
- Auditing
- Autozero - Autotrack
- Dynamic adjustment in production
- Production stoppages management
- Production control
- Remote communication for distance maintenance
- PID system (FEEDBACK)
- Compliance with MID directive

Versión 2

* Varpe ofrece la posibilidad de adaptar las especificaciones estándar a los requisitos de cada cliente
